ABOUT ME

I am interested in software development, artificial intelligence, and data analytics, with hands-on experience in building computer vision models and cross-platform applications. I have a strong foundation in system architecture design and the Software Development Life Cycle (SDLC). I am looking for a Data Analytics or Software Engineering internship where I can apply my technical and problem-solving skills to develop practical solutions and deliver meaningful, data-driven outcomes.

EDUCATION

BACHELOR OF COMPUTER SCIENCE

Rangsit University
2024 - 2026
Present

HIGH SCHOOL DIPLOMA (SCIENCE-MATH)

Nawamintharachinuthid Horwang
Nonthaburi School
2021 - 2023

JUNIOR HIGH SCHOOL

Nawamintharachinuthid Horwang
Nonthaburi School
2018 - 2020

LANGUAGES

English: Native Thai: Native

SKILLS

Software Development	Data / Analytics
• Flutter / Dart	• SQL
• Python	• Data Visualization (Power BI / Tableau)
• API / Backend (FastAPI, Node.js)	• Data Processing (Pandas)

PROJECTS & EXPERIENCE

SMART MEMBER APP (FLUTTER)

2026-NOW

Tools: Flutter, Dart, JSON

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

- Developed a cross-platform mobile application for sports facility booking
- Designed user interface and booking workflow system
- Implemented mock data handling for testing and system simulation

COMPUTER VISION MODEL DEVELOPMENT

2025-2026

Tools: Python, OpenCV, Machine Learning

Built a computer vision model to analyze and process image data, focusing on feature extraction and object detection concepts.

- Developed a computer vision model for image detection and analysis
- Processed and cleaned image datasets for training
- Applied machine learning techniques to improve model performance
- Evaluated model accuracy and optimized parameters

SUPERCOMPUTER WEATHER PREDICTION SYSTEM

2024-2025

Tools: Python, FastAPI, Machine Learning

Developed a data-driven system to simulate weather prediction using environmental data such as temperature, humidity, and rain probability.

- Collected and processed environmental input data for analysis
- Designed prediction logic to estimate weather conditions
- Built a backend system using FastAPI for real-time data processing
- Generated outputs including temperature, humidity, and rain chance
- Improved system usability by presenting results in a clear format

ACHIEVEMENT

- Developed multiple projects combining software development and data analytics
- Strong understanding of SDLC and system design principles
- Experience in building end-to-end applications from backend to data processing
